DETAILED ACTION

Response to Arguments

1. The indicated allowability of claim 19 is withdrawn in view of the newly disclosed reference to Smith et al. EP 0 905 528. Rejections based on the newly cited reference follow.

Claim Objections

- 2. Claims 19-26 and 28-33 are objected to because of the following informalities:
 - a. Claim 19, line 15, "an output" should be --the output--, to indicate that there is a single output of the front end stage and avoid confusion in line 20 where "the output" is referred to, but two outputs are previously implied from lines 10 and 15, making it unclear which of the two outputs is being referenced.
 - b. Claim 29, line 15, "an output" should be --the output--.

 Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 15, 19-21 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over
 Smith et al. European Patent Application 0 905 528 (submitted by applicant).
- 5. Regarding claim 19, Smith et al. disclose a multi-mode receiver in Fig. 3, comprising a front end stage connected to an antenna, where a 1090 MHz RF input signal is provided to RF amplifier 21, a mixer 23 for converting the amplified RF signals to IF, a first IF channel

Art Unit: 2634

comprising narrowband filter 34, a second IF channel including wideband IF filter 30, and a processor 12C coupled to the first and second channels, where narrowband filter 34 of the first IF channel is coupled to the output of the front end stage through wideband IF filter 30 of the second channel.

- 6. Smith et al. does not expressly disclose that the front end stage comprises a RF filter.

 However, RF filters are well known in the art for filtering a received RF signal to provide a RF signal at a desired frequency.
- 7. It would have been obvious to one of ordinary skill in the art to use a RF filter to provide the 1090 MHz filtered signal to the amplifier 21 of the front end stage of Smith et al. in order to eliminate signals at unwanted frequencies.
- 8. Regarding claim 15, the first IF channel includes amplifier 31 for amplifying Mode S signals, which are PSK signals.
- 9. Regarding claim 20, Smith et al. does not expressly disclose the 3-dB bandwidth of a RF wide band filter is about 20 MHz. However, a 3-dB bandwidth for the filter is considered a design consideration that fails to patentably distinguish over Smith et al.
- 10. Regarding claim 21, a RF signal of 1090 MHz is supplied to RF amplifier 21, broadly considered to be about 1030 MHz.
- 11. Regarding claim 23, the bandwidth of filter 34 is 4 MHz, broadly considered to be about 7.5 MHz.
- 12. Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al. in view of Baker U.S. Patent 5,199,109.

Art Unit: 2634

- 13. Regarding claim 25, Smith et al. teach a multi-mode receiver as disclosed above, but do not expressly disclose that the front end stage includes overload limiting diodes between the antenna and the RF filter.
- 14. Baker discloses the use of overload limiting diodes 201 between an antenna 22 and a RF front end 202 (see col. 7, lines 6-12, Fig. 4).
- 15. It would have been obvious to one of ordinary skill in the art to use overload limiting diodes as taught by Baker between the antenna and the front end of the receiver of Smith et al. in order to prevent overload of the receiver from extremely strong signals, as stated by Baker in column 7, lines 6-9.

Allowable Subject Matter

- 16. Claims 26 and 29-33 would be allowable if amended to overcome the objection set forth in this Office action.
- 17. Claims 14, 16-18, 22, 24, 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims, and amended to overcome the objection set forth in this Office action.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **David B. Lugo** whose telephone number is (703) 305-0954.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Stephen Chin**, can be reached at **(703) 305-4714**.

Art Unit: 2634

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

P.O. Box 1450

Alexandria, VA 22313-1450

or faxed to:

(703) 872-9306

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.
